## About me

With over 1 year of experience, I specialize in writing clean, efficient and minimalist code. I am very adaptable and always ready to learn and use the best tools available for each project, creating highly flexible and scalable applications. I am self-taught and curious, which allows me to easily acquire new skills. Committed to delivering high-quality results in each project.

## Technical abilities

**Tools and technologies:** Node.js, React, Next.js, Astro, Material UI, JWT, Angular, API Restful, Express.js, Tailwind, React Context, Git, Github, Amazon Web Services (básico)

**Languages:** TypeScript, JavaScript ES6, HTML, CSS, PHP, Python, SQL

**Databases:** MySQL (MariaDB), MongoDB, IndexedDB y PostgreSQL

**Others:** UX/UI (basic), design of interactive applications based on finite states, creation of complex Bots (for scraping or other uses)

**Current interests:** Cloud, distributed systems, microservices, Kubernetes, Docker, AI, Web3, Blockchain, functional programming (Haskell, F#), reactive programming

## Soft skills

I stand out for my excellent communication skills and aptitude for teamwork, as well as my ability to solve problems effectively and my constant search for continuous improvement in each project.

---

## Professional experience

### Full Stack Developer and Computer Technician

RPM Motorcycles | Buenos Aires, Argentina | 2023 - Present

In RPM Motorcycles, I specialize in developing and maintaining custom software solutions to optimize company operational efficiency, as well as diagnosing and resolving technical problems in existing systems.

### Featured Projects in RPM Motorcycles

#### Gautama Prices (2024)

Automation of price updates from multiple suppliers, integrated with Contabilium ERP for inventory and billing management.

**Technologies:** Node.js, Next.js, TypeScript, React, Dexie.js, Material UI, Lodash

**Achievements:** Reduction of task completion time from several days (4 employees) to a few hours (1 employee). Implemented continuous pricing updates, eliminating infrastructure costs through a serverless frontend approach.

### Zpl Labels (2023)

Automation of generation and printing of ZPL labels from the application on a local server, integrated with CUPS.

**Technologies:** Node.js, Next.js, TypeScript, React, ZPL, CUPS

**Achievements:** Optimization of the product labeling process, reducing errors and processing time.

### Other Responsibilities and Achievements

I implemented continuous improvements in business processes through programmatic solutions. I collaborated with different departments to identify technological needs and develop appropriate solutions.

### Full Stack Developer

Freelancer | 2023 - Present

My projects range from dynamic websites to automating complex tasks with specialized bots. Using a wide range of technologies to create efficient and scalable solutions that meet the specific needs of my clients.

### Featured projects

#### **Advanced Scraper Project (2024)**

Automation of data collection from an account without API, integrated with financial movement management.

**Technologies:** Ink (React for console UI), Puppeteer, Express, TypeScript

**Achievements:** Development of a custom scraper that completely automates the collection of financial movement data. This project allowed for the complete and successful automation of the data collection process, providing an efficient and effective solution for the client.
